

HOW TO TRANSFORM A CAR INTO A CHILDREN WINTERSHELTER

Step 1 Find a safe place for the car

Shelters built from cars are easy to transport, and can therefore be placed in a circle or next to other shelters. Place the cars so that one door can still be opened and plastic or other materials can cover the space between the cars.

Step 2 Remove all the seats

After removing the seats the car will provide far more space. More people will find protection against the cold and wind. Use the seats to have a comfortable place to sit on, outside the car, under the plastic or canvas cover.

Step 3 Isolate the shelter from the inside

A) Cover the floor with mattresses.

Mattresses will provide a good isolation against the cold coming from the ground.

B) Cover the floor with clothing etc.

A thick layer of clothing, cloth, plastic bags and wrapped newspapers will provide isolation.

C) Cover the windows with clothing and newspapers

Step 4 Make isolation-materials for the outside

Fill plastic bags or brick-bags with stones, rubble, earth, ice or snow.

Step 5 Place the bags around the car

Place the bags so that they will prevent the wind from blowing under the car.
